

Wide table

one row per product

ID, category, season

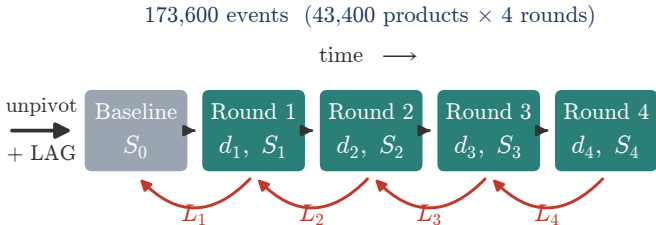

price, brand, channel

baseline sales S_0

discounts $d_1, \dots, d_4$

sales $S_1, \dots, S_4$

43,400 rows

Incremental lift: $L_j = S_j / S_{j-1} - 1$ (each round vs. the period just before it)

Not used: cumulative lift $C_j = S_j / S_0 - 1$, which inherits the effect of earlier rounds
